# **Methodology & Tools**

- Automated Python script loads payloads from file, sends HTTP requests, extracts evidence with BeautifulSoup4.

- Auto-classifies results, exports as PDF/Markdown/JSON.
- SQLmap integration for advanced SQLi detection.
- Ready for CI/CD: can run in GitHub Actions/Jenkins.

#### Recommendations

- Use prepared statements (parameterized queries) for all database access.
- Enable a Web Application Firewall (e.g., ModSecurity + CRS) in production.
- Build a code review checklist for input validation and output encoding.
- Patch all web apps and dependencies regularly.
- Integrate automated security testing (e.g., SonarQube, OWASP ZAP) into CI/CD.
- Regularly update payload signatures and review recent CVE advisories.
